Internet connection	Internet connection bandwidth of 1.5Mbps and <500 ms latency.

Cloud Solution Requirements

VPN	Internet connection bandwidth of 1.5Mbps and <500 ms latency.
Single Sign-On (SSO)	If the SSO option is available in the selected Basware service, the Customer is responsible for the configuration of their IdP solution and Basware is responsible for the configuration of the Basware service. The Customer IdP solution must be accessible through the Internet.
Network	<p>The Customer is responsible for their data network capacity. The Customer must grant access through their firewalls and proxies to *.basware.com and *.basware-saas.com domains. The Customer must provide Basware with detailed network information if requested: for example IP address of SFTP client, proxy server, and local networks that need to be allowed access through the Basware firewalls. The Customer is also responsible for the testing of their data network connections. TLS 1.2 or higher is required for all network communications.</p> <div data-bbox="423 657 1406 766" style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <p> Exceptions</p> <p>Basware P2P Workplace does not support network accelerators.</p> </div>
P2P Integration	<p>Files over SFTP, Web APIs, and where the service level allows, real time system links, are the supported methods of integration between Customer and Basware systems to enable data exchange.</p> <p>The use of a real time system link may require a private network connection using a VPN tunnel. Customers are responsible for establishing and maintaining their end of a VPN tunnel. Supported real time system links are Web APIs and SAP BAPI/RFC web service calls (Only supported to SAP products currently supported by SAP).</p>
